

## Fraud Risk & Reduction

### Businesses

- 50% of small businesses have reported cybercrimes in the last year<sup>1</sup>
- On average cybercrimes cost businesses \$200,000<sup>1</sup>

### Home Security

- 65% of people have the same password for multiple devices<sup>2</sup>
- 47% have their passwords stored in a text file on their computers<sup>2</sup>

## Our Solution

### Voice and face authentication

Say-Tec's innovative approach combines multi-modal biometrics, such as voice and face for every authentication event.

### Available on iOS and Android devices

Say-Tec's innovative voice and facial technology identifies each authentication and can be implemented on any iPhone or Android device within apps or while accessing a website.

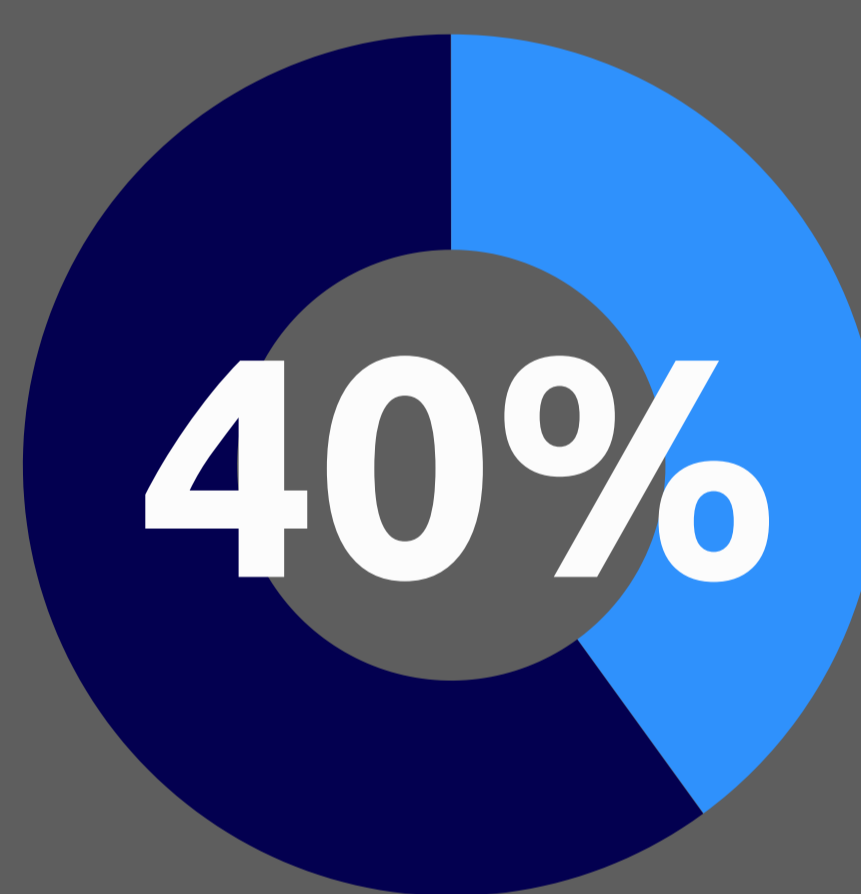

## Password Vulnerabilities

Do you rely on a password or an on-device fingerprint to safeguard your customers' accounts or your company's private information?

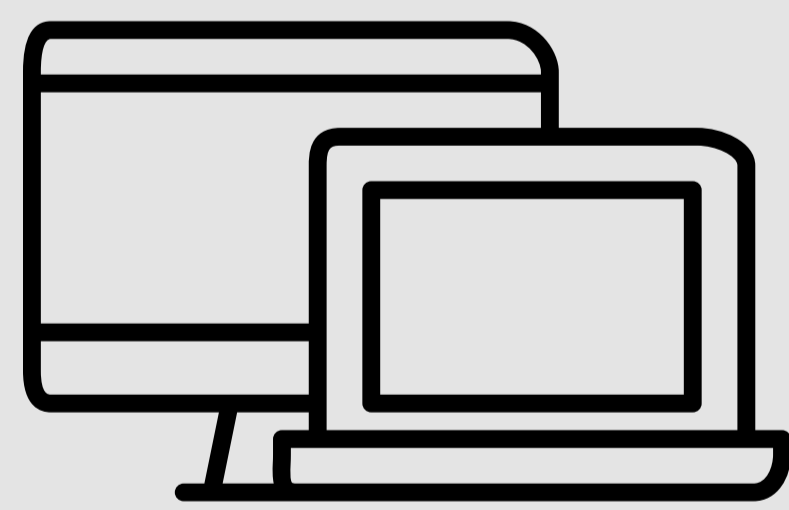

13 Million consumers were victims of account takeover in the last year<sup>3</sup>

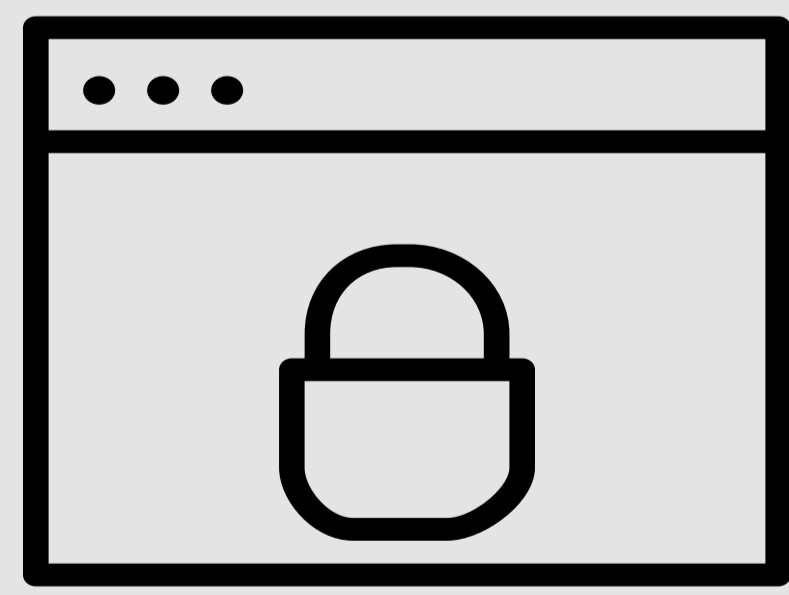

40% of all account access attempts are high risk. This includes financial data and high-value information<sup>2</sup>

## Our Mission

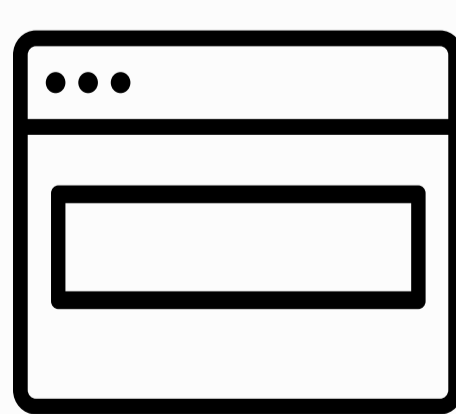

User authentication should be as simple as it is secure. Our mission is to help consumers and organizations be safe in their digital transactions and to help business leaders dramatically improve the way they interact with their critical information and their customers.

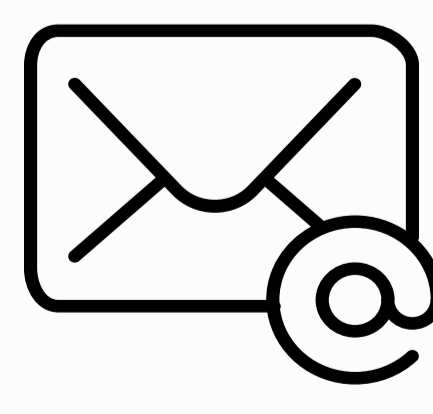

Say-Tec combines voice and face biometrics into a seamless solution that reduces fraud and protects customers and can provide a 'step-up' Authentication to improve security for companies that currently have existing solutions.
